### A pump-action shotgun with a tactical look.

A FABARM pump shotgun which perfectly combines a very strong personality with innovative technical points. Let us first note its very linear configuration, with a stock having a so-called “parallel” slope. In the firing phase, the recoil is thus more rectilinear and the elevation of the muzzle of the gun is significantly lower. Ergonomics with the presence of a butt cheek and a return spring in the handguard for faster and easier rearming. Let's also not forget the very innovative grenadier ring system whose anchoring allows the carabiner of the sling to be freely moved from 9 to 12 o'clock depending on the phase of use. Precise, modern, stylish, this rifle is aimed at both demanding shooters and “home defense” use.

- Capacity: 4+1 shots allowing classification in category C.
- Non-dispersing rifled barrel, drilled in the mass, with a length of 61cm (24") integrating the steel muzzle brake.
- Cantilever type rail fixed on the barrel allowing the latter to be disassembled without requiring new adjustment of the optics.
- Complete barrel liner.
- 7075 T6 aeronautical alloy casing.
- Carcass and jacket finish: Cerakote Carbon Grey.
- Composite stock called Pro Forces with fixed cheekpiece.
- Stock length: 320 mm.
- Reset with return spring (removable) in the handguard.
- Nylon flip-up adjustable and folding rear rise and handlebars.
- Grenadier rings allowing the anchoring of straps from 9 to 12 o'clock.
- Test pressure: 1630 Bar. compatible with steel balls.

A FABARM pump shotgun which perfectly combines a very strong personality with innovative technical points. Let us first note its very linear configuration, with a stock having a so-called “parallel” slope. In the firing phase, the recoil is thus more rectilinear and the elevation of the muzzle of the gun is significantly

lower. Ergonomics again with the presence of a butt cheek and a return spring in the handguard for faster and easier rearming. Let's also not forget the very innovative grenadier ring system whose anchoring allows the carabiner of the sling to be freely moved from 9 to 12 o'clock depending on the phase of use. Precise, modern, stylish, this rifle is aimed at both demanding shooters and “home defense” use.

This rifle therefore allows regular and intensive use of high-performance steel ball cartridges.

A shotgun with muzzle brake to reduce recoil. The barrel is tested with steel balls at 1630 bars (more than the Saint-Etienne test). It is therefore possible to use High Performance steel ball cartridges in this rifle.
