**The Canifugue Mix FUG1031 anti-runaway system for dogs works as a virtual barrier. Your dog is safe in a perimeter that you define.**

No longer worry about your dog's escapades or the deterioration of your flower beds. NUM'AXES offers you a modern, reliable and efficient anti-escape fence.

You limit your dog's free space by installing a wire, called an antenna wire, around the authorized perimeter. This wire is traversed by a radio signal coming from a transmitter box.

When your dog, equipped with a receiver collar, approaches the antenna wire, he is warned by audible warnings that he is too close to an area which is prohibited to him.

If it continues to approach the wire, the collar emits electrostatic stimulation in addition to the audible warnings.

Your dog must move away from the wire and return to the authorized area to stop the audible warnings and electrostatic stimulation.

- A selector on the transmitter box allows the system to be adapted to small and large fields
- Simplified settings thanks to the LCD screen on the transmitter box
- Unlimited number of collars for the same transmitter box
- Integrated security systems
- Adjustable stimulation intensity on each collar (8 levels)

Overflowing with vitality, your faithful companion does not always know his limits and causes damage such as: damage to flower beds, vegetable gardens, complaints of wandering ...

But more dramatically, he can be at the origin or the victim of a road accident.

The Canifugue Mix FUG1031 anti-escape barrier is a modern, reliable and efficient system to solve these problems.

- The wire is laid on the ground, buried or overhead on an existing fence.
- For the system to work, the wire must form an unbroken loop that runs from and back to the transmitter box.

- Adjustable zone width (sound warnings / electrostatic stimulation)
- System secured by 3 integrated safety devices:
  - wire break indicator
  - evacuation of the audible warning zone
  - evacuation of the stimulation zone
- There is no limit to the number of receiver collars for a single transmitter box: you can safely keep as many dogs as you want within the same perimeter.
- For each collar, 8 levels of stimulation are available, allowing you to best adapt the intensity of the stimulation to your dog (size, sensitivity, character).
  
- 2 years warranty
- Immersion-tight collar
- Drip-proof transmitter housing
- Collar autonomy: 6 months (normal use)

#### Transmitter box

- Dimensions: 134 x 84 x 25 mm
- Power supply: mains (220 V AC)

#### Anti-fugue collar

- Weight: 69 g (case + battery)
- Dimensions: 58 x 34.5 x 41 mm
- Power supply: 1 lithium battery 3 Volts CR 2 (supplied)
- Nylon strap: length 76 cm - adjustable at the neckline from 20 to 67 cm approximately
