Versatile scope ideal for hunting at dusk

The ALPEN Apex XP 2.5-15x56 scope is an ideal optic for twilight hunting. It scores points thanks to a high magnification (15x) and a large objective diameter of 56 mm, which lets in a maximum of light.

- High Quality Dusk Hunting Riflescope with 4 Reticle with Red Dot
- High magnification and large objective diameter
- Zoom with FluoDigits technology (fluorescent magnification digits)
- New high quality optical treatment for clear and sharp vision.
- Innovative SmartDot technology for energy and time savings
- Reticle in 2nd focal plane (fixed size)
- Adjusting the reticle in MRAD
- Waterproof and resistant to the recoil of the most powerful ammunition
- Reticle adjustment per click: 0.1 mrad (i.e. 1 cm at 100 m)
- Number of clicks in height (elevation): 230
- Number of clicks laterally (drift): 140

ZOOM WITH FLUODIGITS TECHNOLOGY

For handling as comfortable as possible, the zoom ring is pleasantly and broadly ribbed. You can also move it smoothly using a small button. The FluoDigits technology built into the riflescope will help you in low light conditions. Without highlighting, the fluorescent magnification digits allow, in unfavorable light conditions, a quick visual detection of the zoom level. So you will not be discovered and you will be able to read the numbers without problems for at least 5 hours, even at nightfall or in the dark. Moreover, it is also a huge advantage if you use a corrective device.

UNPRECEDENTED SMARTDOT TECHNOLOGY (MADE IN GERMANY)

Thanks to the use of a tilt sensor, the innovative SmartDot technology preserves the battery and makes the riflescope quickly operational. Place the rifle in the firing position so that the luminous point lights up automatically. If it is then replaced in a position that does not allow firing, it goes out immediately. The lighting unit is with the parallax compensator on the left side. Thanks to this automatic switching off of the illuminated reticle, your riflescope is therefore quickly ready for further action again and you not only save energy, but also valuable time. In addition, there is of course a zero-stop on the sighting optics.

ABSOLUTELY WEATHER AND SHOT RESISTANT

Even in adverse weather conditions, the high-quality ALPEN optics allow you to keep an eye on your objective. Heavy rain, snow, fog, or even brief submersion in a stream will not affect the waterproof rifle scope to 3m. The stable housing reliably keeps seals and liquids away from the interior. For perfect vision even in the event of extreme temperature fluctuations, the optics have additionally been filled with nitrogen. Thus, the lenses cannot fog up from the inside. As a true high-end riflescope, the ALPEN Apex XP is of course shotproof up to the most powerful hunting caliber.

The ALPEN Apex XP 2-15x56 is a typical hunting rifle scope with a center tube diameter of 30mm. It convinces with the daylight compatible duplex illuminated reticle and a sensational field of view of approx. 38 m at 100 m. The reticle is in the 2nd focal plane and is therefore of constant size regardless of magnification.

You can easily adjust the reticle adjustment on this riflescope in MRAD - i.e. 1cm per click at 100m. This eliminates the need for conversion to MOA (Minute of Angle).

The riflescope has a new, very high-quality optical treatment that Alpen can be proud of: absolutely clear vision, marked contours and impressive contrasts!

SECOND FOCAL PLANE RETICLE

Since the reticle is in the second focal plane of the optics, its size does not increase as magnification increases. Accordingly, the degree of coverage always depends on the magnification.

ALWAYS ON THE POINT

Thanks to the innovative SmartDot technology with tilt sensor, the light dot switches on and off automatically depending on the position of the rifle. This saves valuable time and protects the battery.

MAGNIFICATION ALWAYS IN FOCUS

Fluorescent magnification numbers on the eyepiece - this is how the innovative FluoDigits technology allows you to visually capture the zoom level in dim light without overexposure. This keeps you undetected and allows you to see magnification numbers even in the dark. A huge advantage when using accessories!

SURVIVES WEATHER AND CONTINUOUS RAIN

If you are not careful for a moment, the target optic is already lying in the puddle. No problem, because the waterproof housing reliably keeps liquids away from the interior of the optics. Even in the heaviest rain showers, no water is guaranteed to get inside.

QUICK RETURN TO ZERO

This target optic is equipped with a zero stop. Because sometimes you have to readjust temporarily due to changing wind conditions. With a properly configured zero stop, you can then set the zero position again without checking your eyes. The zero stop prevents you from turning past the zero position.

LET THERE BE LIGHT!

This optic inspires with its high-quality full multi-layer coating. It increases the light transmission of the coating up to 95%. Expect fascinating moments in bright images.

SHOW YOUR GOAL IN THE RIGHT LIGHT

In general, the larger the diameter of the pipe, the better the passage of light. With its central tube diameter of 30 mm, this optic offers good light transmission.
