A high-performance telescopic sound suppressor with low extension after the muzzle.

- Projects 108 mm from the barrel

It is optimized to give the best results in .308W caliber and other standard calibers in the mid-range segment. It is a versatile silencer that can be compared to the Swedish lagom. It is the most popular Stalon silencer that adapts perfectly to different forms of hunting. It easily adapts to everything.

The Stalon X108 is part of the unique The Model X is the standard in the series, renowned not only as the most popular silencer, but also the best performing. It can be combined with the Front 108 and 149. The Front 108 is optimized for hunting on the move, while the 149 significantly reduces noise.

The system of exchanging the front and rear parts allows, in essence, to transform a Stalon XS108, for example, by adding a Front 149, thus creating two distinct models: XS108 and XS149. This possibility also extends to the addition of rear parts, thus offering endless combinations if exploited adequately.

The modularity of the system also means that each accessory is available to customize the silencer according to the user's preferences and needs. Accessories designed for Model X are compatible with all models in the series, such as open viewfinder, accessory holder and neoprene cover.

Every Stalon silencer reduces recoil, a feature often highly appreciated in a silencer.

Stalon silencers have a long lifespan, being able to withstand approximately 20,000 shots when properly maintained. For the average hunter, this duration represents much more than a lifetime. Our products can withstand temperatures up to 250 degrees. The barrel mount, located behind the silencer, has a melting point of 200 degrees, indicating the need to cool the silencer before continuing to fire. The durability of a Stallion is difficult to match.
